
Monoclonal Antibody To Human CD14

Marker For The Endotoxin (LPS) Receptor

CD14 is a 53'000 - 55'000 Mr glycoprotein strongly expressed on the surface of monocytes and weakly on the surface of granulocytes. It is anchored to the surface by linkage to glycosyl phosphatidylinositol (GPI). CD14 functions as a receptor for endotoxin and is the major receptor involved in the lethal response to both endotoxin and Gram-negative bacteria. In addition to membrane CD14, soluble forms of CD14 can be detected in serum and tissue culture supernatants of cells transfected with CD14.

Product Number:	T-1004 (Lot 01PO9202)
Clone:	TüK4 (Mab0211)
Host species, isotype:	Mouse IgG2a
Quantity:	100µg
Format:	Affinity purified, lyophilized Reconstitute by adding 0.5ml distilled water. This stock solution contains 0.2mg/ml IgG, phosphate buffered saline pH 7.2 (PBS), 10mg/ml bovine serum albumin (BSA) as a stabilizer and 0.02% sodium azide as a preservative.
Stability:	Original vial: 1 year at 4° - 8°C Stock solution or aliquots thereof: 1 year at -20°C. Avoid repeated thawing and freezing.
Applications:	Tested for immunohistochemistry (IHC); has been described to work in FACS. Approximate working dilution for IHC: Frozen sections: 1µg/ml (1:200) Paraffin sections: Not tested Optimal dilutions should be determined by the end user. Suggested positive control: Human placenta. Please see www.bma.ch for protocols and general information.
Immunogen:	Human monocytes.
Antigen, epitope:	The antigen is CD14, the receptor for LPS. The epitope has not been further characterized.
Antigen distribution:	Isolated cells: Positive on granulocytes and monocytes, myeloid leukemia and myeloid cell lines. Tissue sections: Positive on histocytes, Langerhans cells, follicular dendritic cells and high endothelial venules.

Specificity:**Human:** monocytes, granulocytes.**Other:** not tested.
