β-Endorphin (bovine, camel, mouse, ovine) ELISA

β-Endorphin is a 31 amino acid endogenous opioid neuropeptide that is produced in certain neurons within both the central and the peripheral nervous system. It is known to be one of the three endorphins that are produced in humans, together with α-Endorphin and γ-Endorphin, and it primarily acts in the body to reduce stress and maintain homeostasis.

This ELISA was developed with serum from rabbits immunized with β-Endorphin coupled to a carrier protein.
