**AF-16 (26S Proteasome Regulatory Subunit S5A (36-51))
(human, mouse, rat) ELISA**

Antisecretory Factor (AF) is a 41 kDa protein that belongs to the innate immune system and provides protection against several forms of pathological secretory conditions and inflammatory reactions. Its activity is localized in the amino-terminal part of the full-length protein and it is excreted in blood, bile, breast milk, saliva and tear fluid. AF-16 is a 16-amino acid peptide derived from the amino-terminal part of the full-length antisecretory factor (AF) protein. It regulates dysfunctions in the water and ion transport system under various pathological conditions as well as counteracts increased tissue pressure.

This ELISA was developed with serum from rabbits immunized with AF-16 coupled to a carrier protein.
