Copeptin (human) ELISA [UniProt: P01185]

Copeptin is a 39 amino acid peptide generated by the cleavage of Vasopressin-neurophysin 2-copeptin. The main stimuli for copeptin are similar to arginine vasopressin (AVP), that is an increase in osmolality and a decrease in arterial blood volume and pressure. Copeptin has been evaluated as a diagnostic biomarker in vasopressin-dependent disorders of body fluid homeostasis, that is diabetes insipidus and syndrome of inappropriate thirsting (SIAD), respectively. Baseline copeptin levels, without prior thirsting, identify patients with nephrogenic diabetes insipidus.

This ELISA was developed with serum from rabbits immunized with Copeptin coupled to a carrier protein.
