Atrial Natriuretic Factor (1-28) (mouse, rabbit, rat) ELISA [UniProt: P05125, P07500, P01161]

Atrial Natriuretic Factor (ANF) is a 28 amino acid peptide hormone secreted mainly by the heart atria in response to atrial stretch. ANF acts on the kidney to increase sodium excretion and glomerular filtration rate (GFR), to antagonize renal vasoconstriction, and to inhibit renin secretion.

This ELISA was developed with serum from rabbits immunized with Atrial Natriuretic Factor (1-28) coupled to a carrier protein.
