Adropin (34-76) (human, mouse, rat) ELISA [UniProt: Q6UWT2, Q8K1D8, D3ZUG5]

Adropin is a secreted factor involved in energy homeostasis and lipid metabolism. It is encoded by the energy homeostasis associated gene (Enho) and is expressed in liver and brain. In diet-induced obesity (DIO) mice Adropin (34-76) attenuated hepatosteatosis and insulin resistance independently of adiposity or food intake. Additionally, adropin could be a regulator of endothelial function.

This ELISA was developed with serum from rabbits immunized with Adropin (34-76) to a carrier protein.
