Monoclonal Antibody To Human HLA-DQ

Marker for MHC class II

Monoclonal antibody FN81 recognizes the HLA-DQ antigen, an HLA class II antigen with homology to murine H-2A. HLA class II antigens are mainly expressed on specialized antigen presenting cells (APCs), dendritic cells, B-cells and macrophages. HLA class II antigen is presented on activated T-cells. HLA class II molecules present exogenously derived antigen to the T-cell receptor (TCR) on $CD4^+$ T lymphocytes. Both chains in HLA-DQ are polymorphic. HLA-DQ is expressed after DR and DP during haemotopoietic progenitor cell development. It is strongly expressed in the thymic cortex.

Product number: T-1360
Clone: FN81
Lot: 01PO0801
TECHNICAL AND ANALYTICAL CHARACTERISTICS:

Host species, subclass:	Mouse IgG2a
Quantity:	100µg
Format:	Affinity purified, lyophilized
	Reconstitute by adding 0.5ml distilled water. This stock solution contains 0.2mg/ml IgG, phosphate buffered saline pH 7.2 (PBS), 5mg/ml bovine serum albumin (BSA), and 0.09% sodium azide as a preservative.
Stability:	Original vial: 1 year at 4° - 8°C
	Stock solution or aliquots thereof: 1 year at -20°C. Avoid repeated thawing and freezing.
Applications:	Tested for immunohistochemistry (IHC); has been described to work in FACS.
	Approximate working dilution for IHC: Frozen sections: ≤0.2µg/ml (1:1000) Paraffin sections: not tested
	Optimal dilutions should be determined by the end user.
	Suggested positive control: Human tonsil.
	Please see **www.bma.ch** for protocols and general information.
Immunogen:	Stimulated human B lymphocytes
Antigen, epitope:	The antigen is HLA-DQ. The epitope has not been further characterized.

Antigen distribution:	**Isolated cells:** The HLA DQ antigen is present on approximately 10% of peripheral blood lymphocytes.
Specificity:	**Human:** HLA-DQ
	Other: not tested.
