Rabbit anti human Pancreatic Polypeptide [UniProt: P01298]

Pancreatic Polypeptide (PP) is a 36 amino acid anorexigenic peptide hormone secreted by the PP cells in the endocrine pancreas. The function of Pancreatic Polypeptide is to self-regulate pancreatic secretion activities such as endocrine and exocrine. It also has effects on hepatic glycogen levels and gastrointestinal secretions. Secretion of Pancreatic Polypeptide can be accomplished through electrical stimulation of the vagus nerve. Pancreatic Polypeptide is related to Peptide YY and Neuropeptide Y (NPY).

This antibody was generated by immunization of rabbits with Pancreatic Polypeptide coupled to a carrier protein.

TECHNICAL AND ANALYTICAL CHARACTERISTICS

Lot number: A16206

Host species: Rabbit IgG

Quantity: 50µl

Format: Neat undiluted antiserum, lyophilized, packaged under nitrogen.

Reconstitute by adding 50µl distilled water. This will give the equivalent

of undiluted antiserum.

Stability: Original vial: at least one year at 4° - 8°C from date of delivery. Minimize

repeated thawing and freezing of the antiserum by freezing aliquots at

-20°C or below.

Applications: This antibody has been tested and validated in ELISA against

Pancreatic Polypeptide. Other applications like immunohistochemistry (IHC), FACS or Western Blot may work as well. Optimal dilutions should

be determined by the end user.

Please see www.bma.ch for protocols and general information.
