Rabbit anti Met-Enkephalin

Met-enkephalin is a pentapeptide, sometimes referred to as opioid growth factor (OGF). It is a naturally occurring, endogenous opioid peptide that has opioid effects of a relatively short duration. It is one of the two forms of enkephalin, the other being leu-enkephalin. The enkephalins are considered to be the primary endogenous ligands of the δ -opioid receptor, due to their high potency and selectivity for the site over the other endogenous opioids. Met-enkephalin is found mainly in the adrenal medulla and throughout the central nervous system (CNS).

This antibody was generated by immunization of rabbits with Met-Enkephalin coupled to a carrier protein.

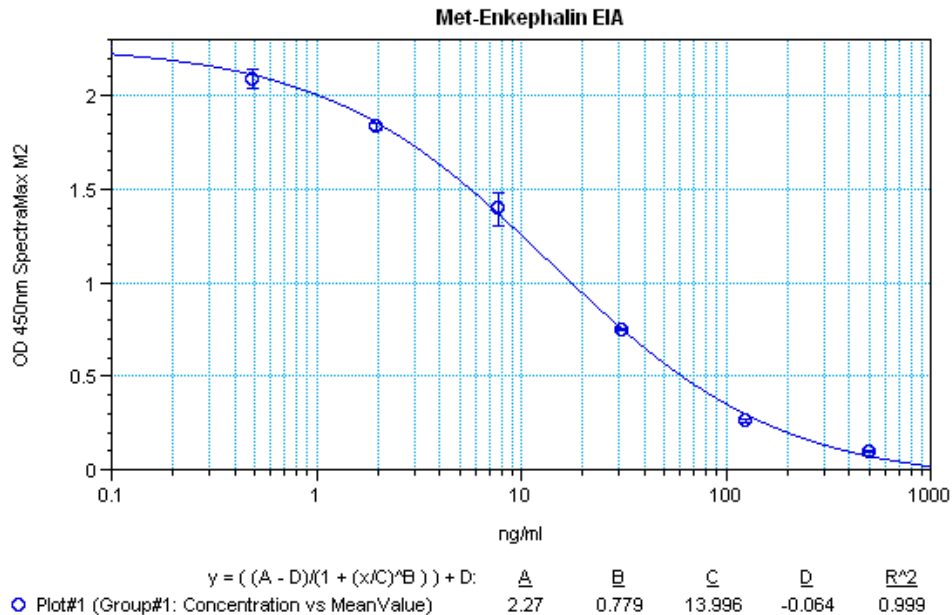

TECHNICAL AND ANALYTICAL CHARACTERISTICS

Lot number:	035388-6
Host species:	Rabbit IgG
Quantity:	50 μ l
Format:	Neat undiluted antiserum, lyophilized, packaged under nitrogen. Reconstitute by adding 50 μ l distilled water. This will give the equivalent of undiluted antiserum; does not contain any preservative.
Stability:	Original vial: at least one year at 4° - 8°C from date of delivery. Minimize repeated thawing and freezing of the antiserum by freezing aliquots at -20°C or below.
Applications:	This antibody has been tested and validated in ELISA against Met-Enkephalin. Other applications like immunohistochemistry (IHC), FACS or Western Blot may work as well. Optimal dilutions should be determined by the end user. Please see www.bma.ch for protocols and general information.
Immunogen:	Synthetic peptide H-Try-Gly-Gly-Phe-Met-OH coupled to carrier protein.

Cross Reactivity:

Peptide:	%:
Met-Enkephalin	100
Leu-Enkephalin	0

Typical titration curve of Met-Enkephalin in a competitive ELISA with this antibody:
