

T-4875

Rabbit anti Dynorphin A (3-14)

Dynorphins are a class of opioid peptides. As their precursor Proenkephalin-B is cleaved during processing, its residues 207-223 (Dynorphin A) and 226-238 (Rimorphin, Dynorphin B) are released, among others. Dynorphin A (1-13) is conserved among various species. Dynorphin A (3-14) is the major fragment of Dynorphin A (1-17) produced in inflamed tissue. It inhibits NF- κ B/p65 activation in response to Lipopolysaccharide (LPS) stimulation.

Dynorphins contain a high proportion of basic and hydrophobic residues. They are widely distributed in the central nervous system, with highest concentrations in the hypothalamus, medulla, pons, midbrain, and spinal cord, where they are also produced. Dynorphins are stored in large dense-core vesicles characteristic of opioid peptides storage.

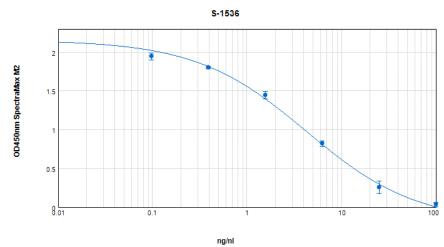

Dynorphins exert their effects primarily through the κ -opioid receptor (KOR), a G-proteincoupled receptor. They are part of the complex molecular changes in the brain leading to cocaine addiction. Dynorphins are important in maintaining homeostasis through appetite control, circadian rhythms and the regulation of body temperature. However, Dynorphin derivatives are generally considered to be of little clinical use because of their very short duration of action.

This antibody was generated by immunization of rabbits with Dynorphin A (3-14) coupled to a carrier protein.

Lot number:	A16978	
Lot number.	A10970	
Host species:	Rabbit IgG	
Quantity:	50µl	
Format:	Neat undiluted antiserum, lyophilized, packaged under nitrogen. Reconstitute by adding 50µl distilled water. This will give the equivalent of undiluted antiserum.	
Stability:	Original vial: at least one year at 4° - 8°C from date of delivery. Minimize repeated thawing and freezing of the antiserum by freezing aliquots at -20°C or below.	
Applications:	is antibody has been tested and validated in ELISA against Dynorphin (3-14). Other applications like immunohistochemistry (IHC), FACS or estern Blot may work as well. Itimal dilutions should be determined by the end user. ease see www.bma.ch for protocols and general information.	
Immunogen:	Synthetic peptide H-Gly-Phe-Leu-Arg-Arg-Ile-Arg-Pro-Lys-Leu-Lys-Trp- OH coupled to carrier protein.	

TECHNICAL AND ANALYTICAL CHARACTERISTICS

Cross Reactivity: PEPTIDE 100 Dynorphin A (3-14)

Typical titration curve of Dynorphin A (3-14) in a competitive ELISA with this antibody:
